## Safety Information Sheet

---

### Grinder 5"

#### Warning!

**Do not apply grinding oil or water during use.**

**Do not expose power tools to rain or wet conditions.**

**Do not make your body including fingers and hands contact with grinding stone during operation.**

**The wheel continues to rotate after the tool is switched off.**

**Always attach the wheel guard during operation.**

**Check that speed marked on the wheel is equal or greater than the rated speed of the grinder.**

**Inspect grinding wheel before use, do not use chipped, cracked or otherwise defective products.**

**Do not use cutting off wheel for side grinding.**

**Be sure switch is OFF before plugging in.**

**Always wear safety goggles and dust mask during operation.**

**Ensure proper ventilation when working in dusty conditions.**

**Disconnect the plug from power supply before installing and removing grinding stone.**

#### OPERATION:

1. Avoid excessive pressure on the grinding stone. Grinding is done by tools weight. Apply grinding stone lightly to the work.
2. Do not apply the whole surfaces of the grinding stone to work material, but apply its circumference. Efficient grinding is achieved by keeping the angle between grinding stone and work material from 15 to 30 degrees.
3. When using a new grinding stone, be certain to grind while pulling tool backwards until the grinding stone becomes rounded on its edge. Then, the grinder can be moved to any direction.
4. Switch off to stop the rotation of the grinding stone, and keep the disc grinder in a safe place. When you keep the disc grinder with the grinding stone rotated in the place filled with dust and shavings, dust and shavings can be gotten into the disc grinder.

**The grinding stone can be cracked or grooved by an impact. If the grinder is hit against something or fallen down, you must check the grinding stone and disc grinder.**
